

## Advantage of dental implant for your oral health

Are you missing any tooth and are you hesitating between getting an implant or choosing a cheaper solution?

One of the main advantages of [Bone Graft for Dental Implant](#) is that they are fixed. In addition, they have a long durability that makes them an option for virtually all life. Dental implants have an approximate average duration of about 25-30 years in 95 percent thanks to the materials of long durability used, such as titanium. **Dental Bone Graft** is the technique used for dental implantations.

### Main advantages of Teeth Implant

- Fear of pain from treatment is no longer an excuse. Today we have techniques that have virtually eliminated the discomfort both at the time of **Bone Loss and Dental Implants** placement, and in the days following the operation. This is the case of dental implants with immediate loading, with which the implant and the prosthesis are placed in a single intervention. You arrive without teeth to the consultation and you go with them put. This technique is used both to replace only a tooth or tooth, and for the entire mouth.
- Prevent the loss of bone mass. So patience can avoid them from **Dental Implants with Bone Loss**. The bones of the jaw and maxilla are the only ones in the human body that are reabsorbed by losing their function. That is, hold the teeth. When the teeth fall, the roots stop stimulating the bone, and the bone is reabsorbed. By placing the implants they replace the roots of the teeth and continue to stimulate the bone. Also one can choose **Temporary Tooth Implant**.
- With the **Permanent Teeth Implants** you will take care of your dental aesthetics. The restoration with implants respects the facial features and does not deform the natural gesture of your face.

- They increase the capacity to chew, much diminished when several dental pieces are lost. The loss of parts affects the chewing, which ends up affecting the digestion. Chewing well helps you take care of your digestive health.
- When an implant by [Dental Bone Graft](#) is placed, we are sure that you are not compromising the development and health of the rest of the teeth. As in the case of dental bridges, you have to use the other pieces to support the fixed bridge.
- . Easy maintenance. Forget about sleeping with your teeth in a glass of water, or the unsightly black lines of the metal and porcelain bridges. Carrying dental implants is like taking your teeth. With proper dental hygiene your implants will be well cared for.

Dental implants are a safe and easy treatment option to show a healthy mouth. The loss of one or several teeth not only affects our aesthetics or disfigures our smile, but also has a more important implication as is the loss of function and general worsening that the whole of the mouth suffers. We should not be alarmed, simply become aware and advise ourselves correctly.
